London Office
MARKET AGENT

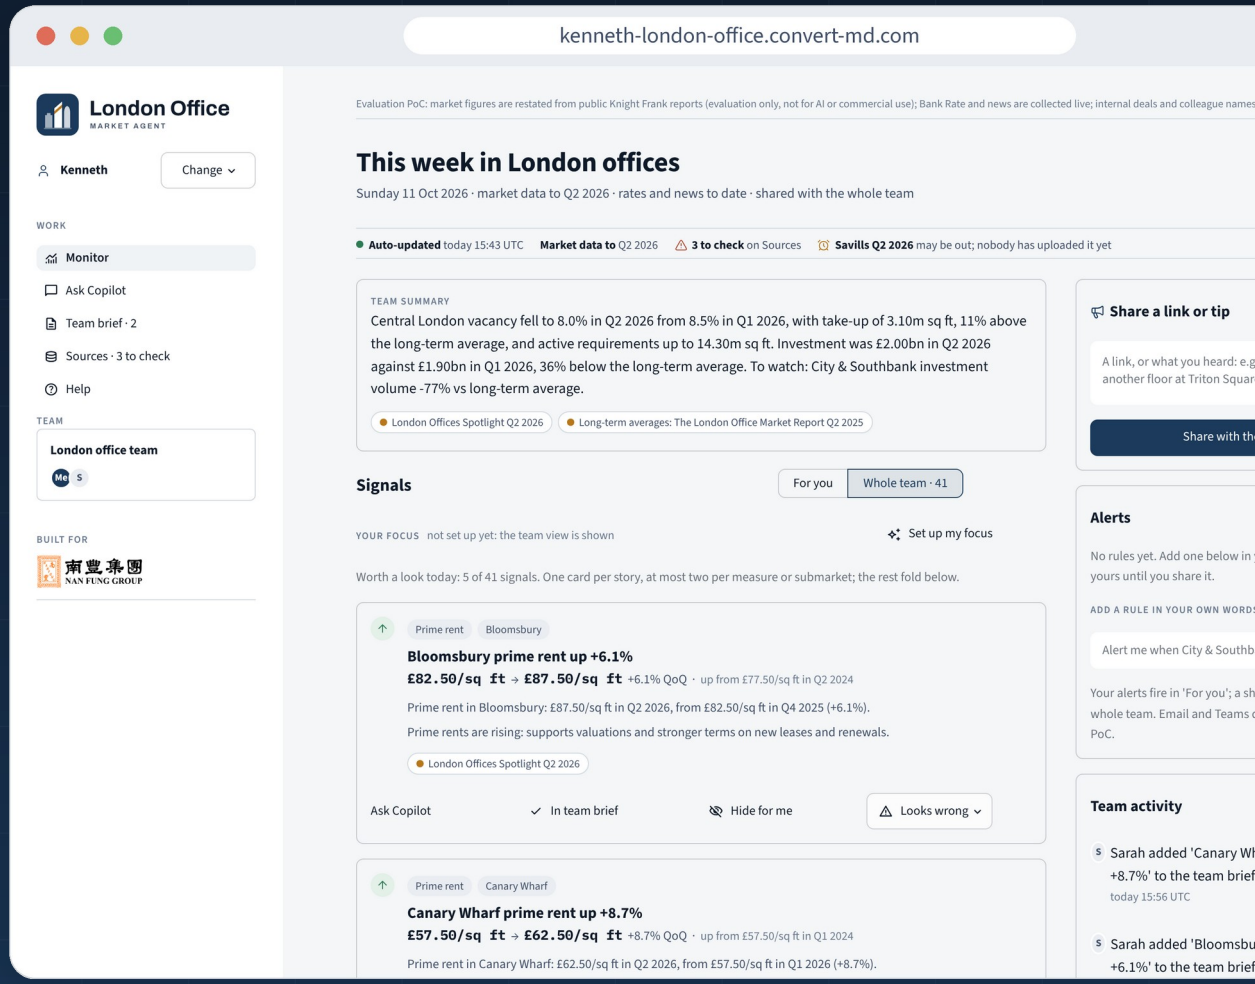

南豐集團
NAN FUNG GROUP

PROOF OF CONCEPT · FOR THE BUSINESS TEAM

Know what moved in London offices before Monday's meeting

One AI market agent the whole team shares. It watches the market, answers questions with the source behind every number, and writes the weekly brief.

Line: Central London vacancy, Q1 2024 to Q2 2026 (9.9% to 8.0%)

A REAL MONDAY · 11 OCTOBER 2026

What the agent flagged for the team this week

Read overnight from 9 agency reports, Bank of England data and 81 news items. Four things worth a meeting:

8.0%

Central London vacancy

Down from 8.5% last quarter and 9.9% in Q1 2024. Take-up 3.10m sq ft, 11% above the long-term average.

SO WHAT FOR US

Demand is back: hold firmer terms on lettings and renewals.

6.4pp

White City Grade A gap

Grade A 11.5% vacant against 17.9% for all space; the gap widened from 5.0pp last quarter.

SO WHAT FOR US

Flight to quality: refurbish older floors or price them to let.

−77%

City & Southbank investment

£0.37bn traded in Q2 2026 against a long-term average of £1.60bn a quarter.

SO WHAT FOR US

Few comparables: take care with valuations; fewer rival bidders.

540k sq ft

City Core speculative space

81 Newgate Street, EC1: under construction, no pre-let, due Q4 2026.

SO WHAT FOR US

New competition for City tenants near St Paul's from this quarter.

Also this week: Canary Wharf prime rent +8.7% to £62.50/sq ft. Each figure opens the report page it came from, and one click puts it in the team brief.

Sources: Knight Frank, London Offices Spotlight Q2 2026 and The London Office Market Report (long-term averages), restated for evaluating this PoC only; developer and planning announcements (81 Newgate Street). The agent's own signals, 11 Oct 2026.

WHY IT MATTERS

Fewer hand-offs, nothing lost in the retelling

Today a market number passes through several people before it reaches a decision. Each hop costs a message and drops a detail.

TODAY: ONE FIGURE, HAND TO HAND

Agency report
City Core vacancy 6.1% · Q2 2026 · all grades

↓

Analyst's spreadsheet
City vacancy 6.1%

quarter and source dropped

↓

Email to the deal team
City vacancy around 6%

City Core becomes 'the City'

↓

IC slide
City vacancy ~6%, tight

"Which quarter? Whose figure?" Another email.

WITH THE AGENT: EVERYONE READS THE SAME LIBRARY

6.1% City Core vacancy

Q2 2026 · all grades · Knight Frank report · uploaded by a colleague, dated · footnote [1] in the brief

The number travels with its quarter, its definition and its source, in Monitor, in every Copilot answer and in the brief. Nobody retypes it, so nothing falls off.

Why? ask the Copilot, answered with the source
Looks wrong? one flag, and the whole team sees it

Ask, don't email

Anyone asks the Copilot directly and gets the table, the chart and the report behind it. No request queue.

Context never drops

Publisher, period and definition stay attached to every figure, wherever it is shown or exported.

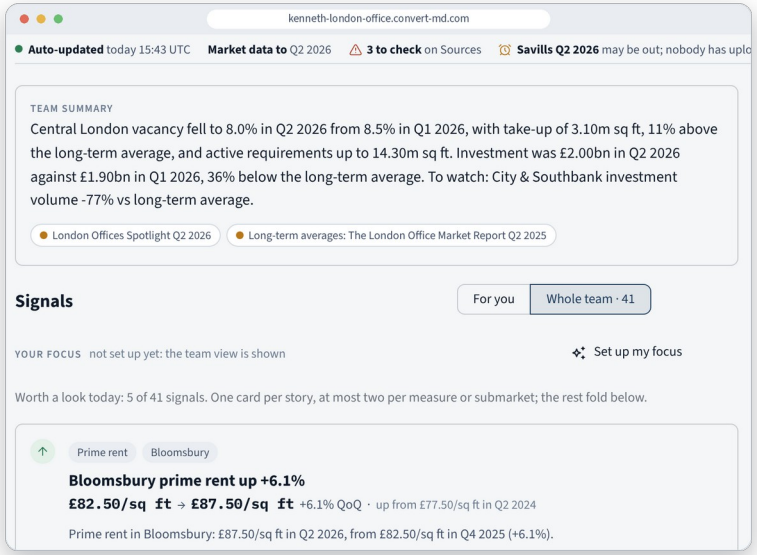

One catch reaches everyone

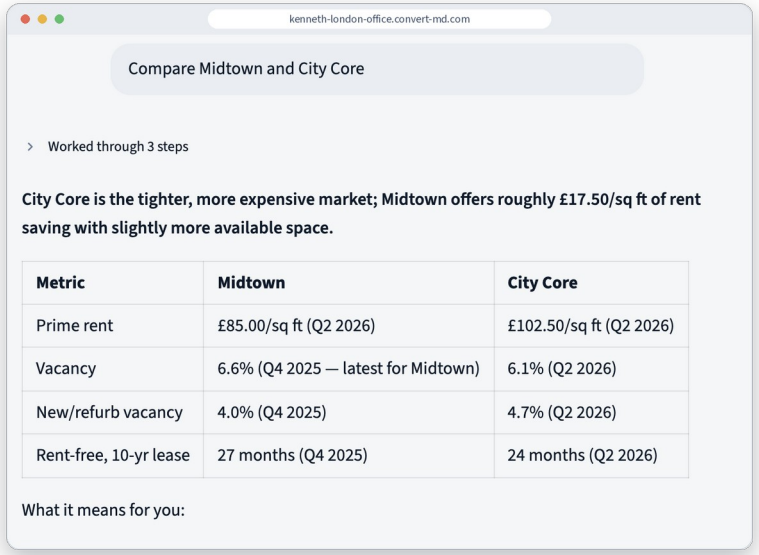

A tip, a flag or an upload by one colleague is visible to the whole team at once, with their name.

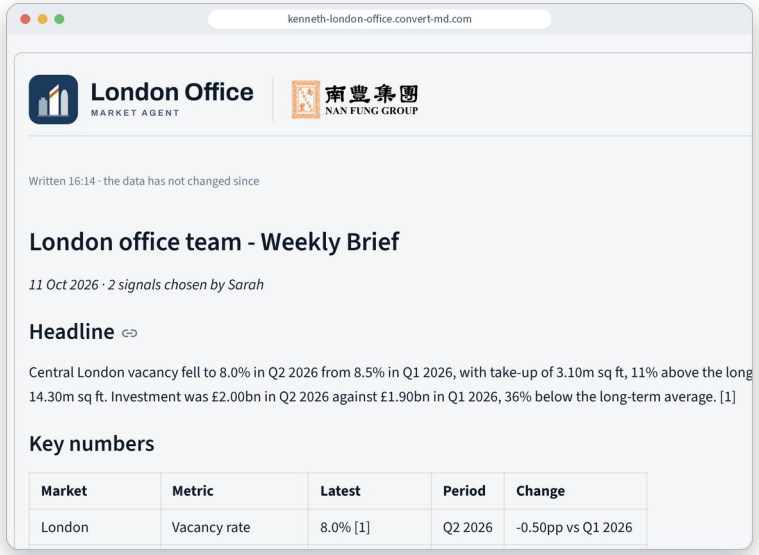

HOW THE TEAM USES IT

One shared workspace, three jobs

No roles to choose. Everyone sees the same market; each person can set their own focus in one sentence.

MONITOR Stay ahead

The week in two sentences, then the five signals worth a look, each with its source. Alerts in plain English.

Head of fund reads it in three minutes on Monday.

COPILOT Decide

Ask from any page. Answers come with tables, charts and the report behind every number.

Acquisitions compares Midtown and the City before an IC meeting.

TEAM BRIEF Report

Anyone adds signals; one click writes a footnoted brief, a Word or PDF note, or slides.

Asset management sends the same brief to the board and the IC.

NUMBERS YOU CAN PUT IN A BOARD PAPER

Every number has a source and a check

The agent never makes up a figure: numbers come only from the team's library, each with publisher, period and who added it.

THREE KINDS OF SOURCE

Open data, collected by itself
Bank of England rates and news feeds, every morning, because their licences allow it.

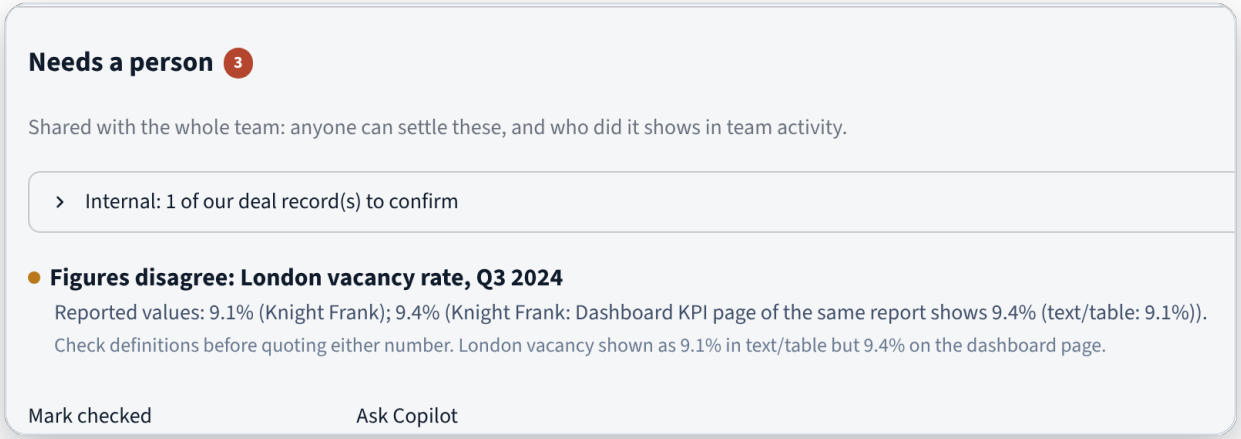

Agency reports, uploaded once
Knight Frank, Savills, BNP Paribas: their terms bar automatic collection, so any colleague uploads the PDF for everyone.

Our own deals, kept internal
Lettings and valuations we did, typed, photographed or uploaded; marked internal or quotable.

UNDER THE HOOD
12 Python skills, 52 tools, 9 reading playbooks. Xiaomi MiMo models (swappable for Claude or GPT); a durable agent engine that resumes after a crash.

EVERY FIGURE READ FROM A REPORT PASSES THREE CHECKS

1. **In the page**
   The number must appear on the page it was read from.
2. **Plausible**
   Outside a sensible range for that measure? Flagged.
3. **Agrees with others**
   Compared with other publishers for the same quarter.

A real catch: the same Knight Frank report gives London vacancy as 9.1% in its table and 9.4% on its dashboard page. The agent kept both, warned the team, and any colleague can settle it.

NEXT STEP

Try it today, then run a four-week pilot

READY NOW

Live and open to try
No login. Updates itself every morning at 06:30 UTC.

Tested with the live model
Copilot, PDF reading, briefs and three people at once.

97 automated tests pass
Open code; one command starts it on any server.

Honest about gaps
Anything not built yet says so on screen.

THE PILOT, FOUR WEEKS

Three to five people
Fund, acquisitions, asset management and research.

Measured, not assumed
Questions colleagues answer themselves, figures that need a person, briefs sent without corrections.

Built during the pilot
Email and Teams digest; jobs and pipeline feeds (Nomis, City of London); EPC ratings.

Then decide
Roll out, change, or stop.

WHAT WE NEED FROM YOU

- The agency reports we already subscribe to
- One owner for flagged figures
- A yes on where data is hosted and which AI model we use

Scan to try it
Ask: "Compare Midtown and City Core"
