USER GUIDE · OCTOBER 2026

London Office Market Agent

How to use the app

One shared tool for the London office team. ***Monitor*** *watches the market,* ***Ask Copilot*** *helps you make a call,* ***Team brief*** *turns the week into a research note and a slide deck, and* ***Sources*** *is the library behind all three. Every number links to where it came from.*

ABOUT THIS GUIDE

Each screenshot is the real app. Orange boxes and numbered dots mark what to look at; the numbered notes beside each picture say what it does. The same guide is in the app under **Help**.

Evaluation version: market figures are restated from public reports for evaluation only; internal deals and colleague names are demo data.

05 Sources 8

01 · GETTING STARTED

Find your way around

There is no login. Pick your name once and the browser remembers you; your focus, alerts and conversations are kept under your name. Everything you share, flag, upload or add to the brief is seen by the team.

The menu, your name and the Copilot button

1. **Who you are.** Pick your name the first time. Press **Change** if someone else uses this browser.
2. **The four workspaces.** A number beside a name means something is waiting, such as *Team brief · 2* or *Sources · 4 to check*.
3. **Help** opens this guide inside the app.
4. **The Copilot button** opens the Copilot from any page. **Ctrl+K** does the same; **/** puts the cursor in its box.

Monitor

What changed this week, for the team and for you. Signals, alerts, tips and team activity.

Ask Copilot

Questions about the market, answered from the library with charts and sources.

Team brief

The week as a footnoted research note in Word or PDF, and as a slide deck.

Sources

The shared library: open data, uploaded reports and internal data, and what needs checking.

Your first five minutes

1. **Pick your name** in the sidebar.
2. **Read the week** on Monitor: the summary and the top signals.
3. **Set up my focus** with one sentence about your job.
4. **Ask Copilot** a question and open its sources.
5. **Add to brief** a signal the team should see.

KEYBOARD

Ctrl+K opens the Copilot · **/** jumps to its box · **Esc** closes the panel or the slide editor.

LANGUAGES

Ask in English or Chinese. The Copilot answers in the language you use.

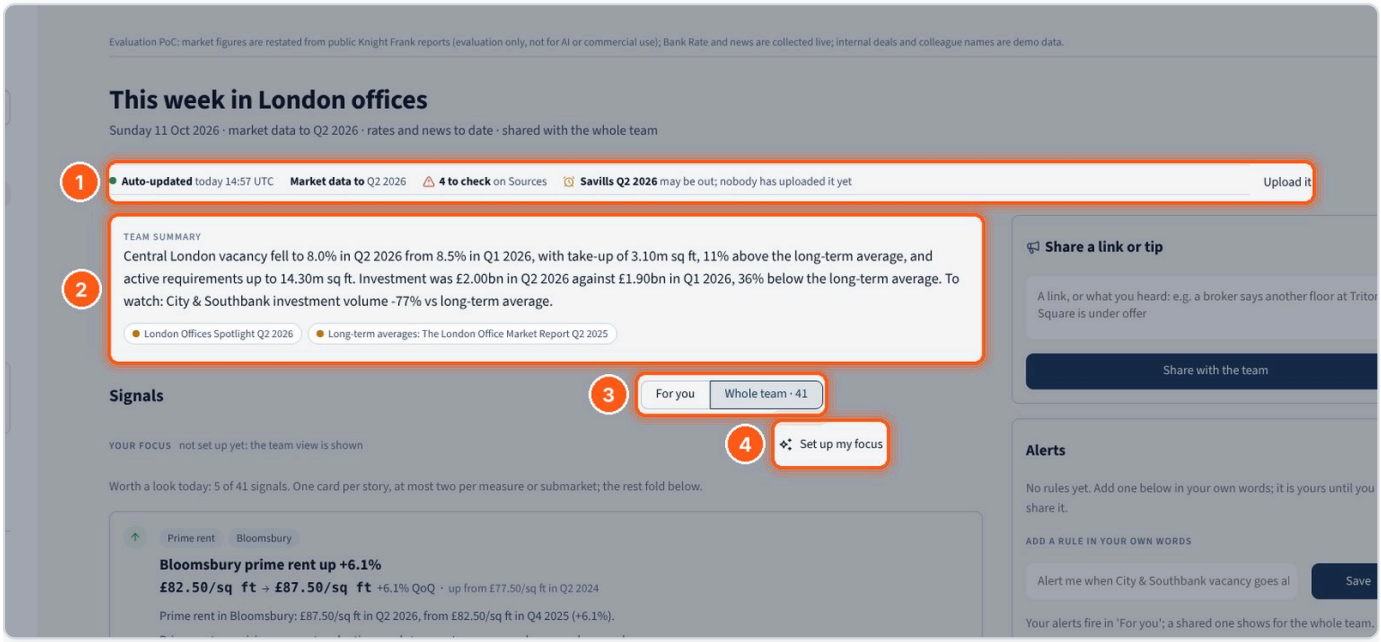

IT KEEPS WORKING

Answers, briefs and decks carry on in the background when you leave the page. Only **Stop** ends a run.

02 · MONITOR

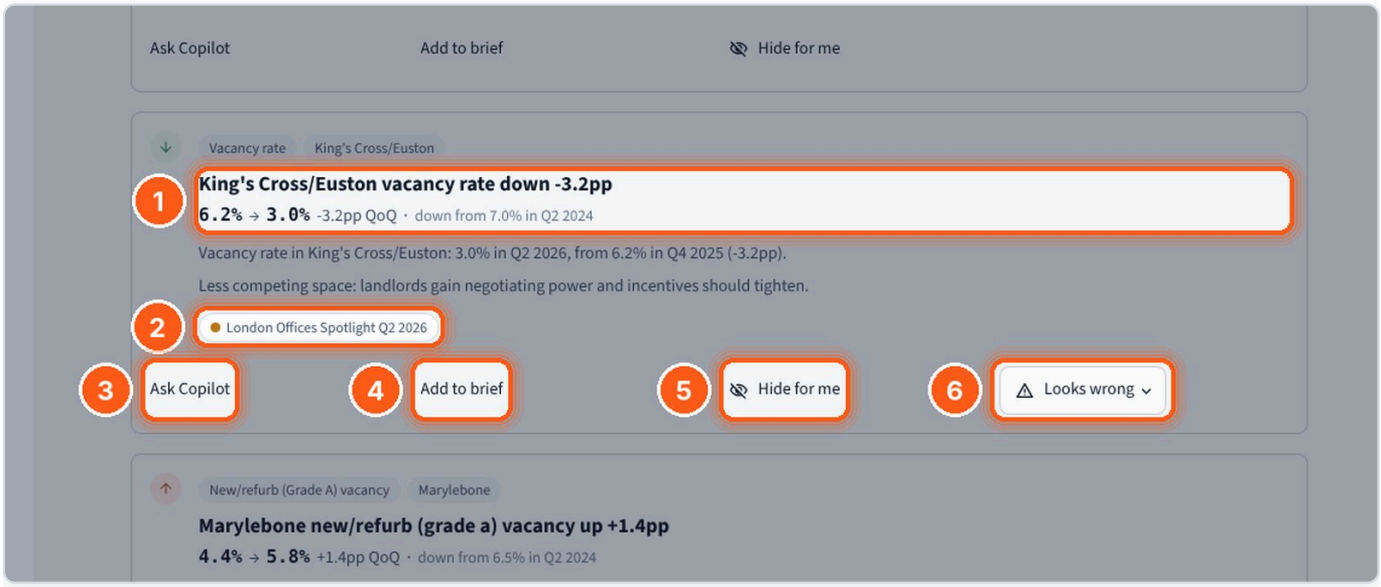

See what changed this week

Monitor is the first page. It shows what moved in London offices this week, for the whole team, and your own view once you have set up your focus.

Read the week

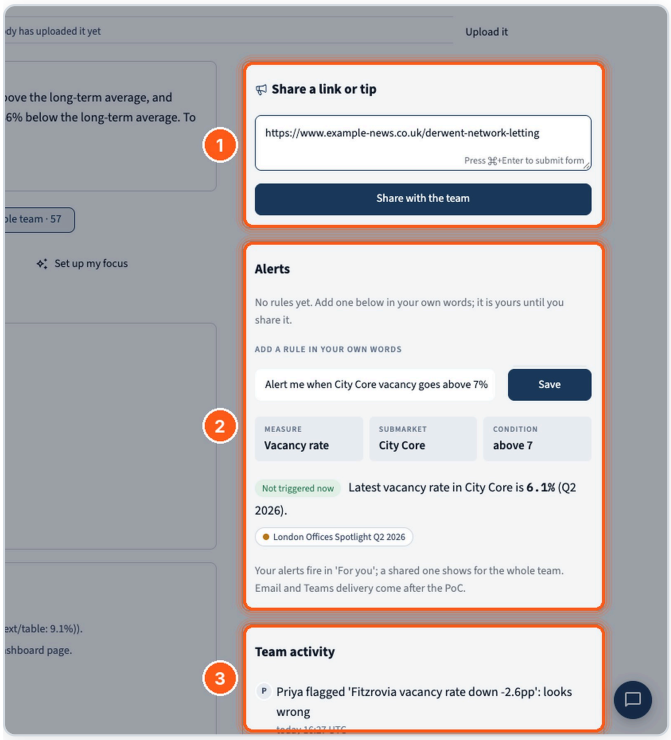

1. **Freshness strip**: when open data last came in, which quarter the market data covers, how many figures need checking and which expected reports nobody has uploaded (**Upload it** takes you there).
2. **Team summary**: the week in two sentences. The chips under it are its sources.
3. **Whole team** is the day's pick for everyone; **For you** is your own view.
4. **Set up my focus** builds that view from one sentence about your job.

Use a signal card

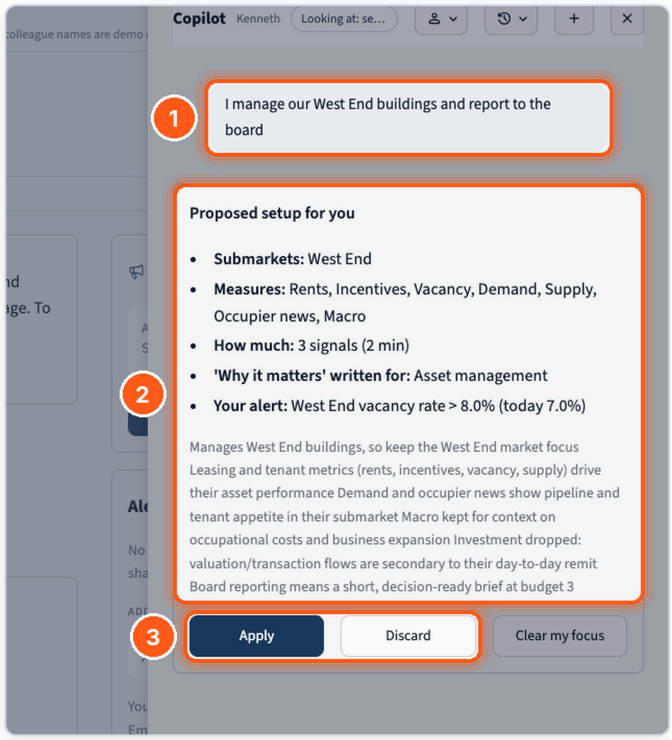

1. Before → after, the change, and the same quarter a year or two ago.
2. The source chip opens the report the number came from.
3. **Ask Copilot** opens the Copilot already pointed at this signal.
4. **Add to brief** puts it in the team brief; it then reads **In team brief**.
5. **Hide for me** hides it from your views only.
6. **Looks wrong** flags the figure for the team with your reason. It stays usable with a warning until someone settles it on Sources.

02 · MONITOR, CONTINUED

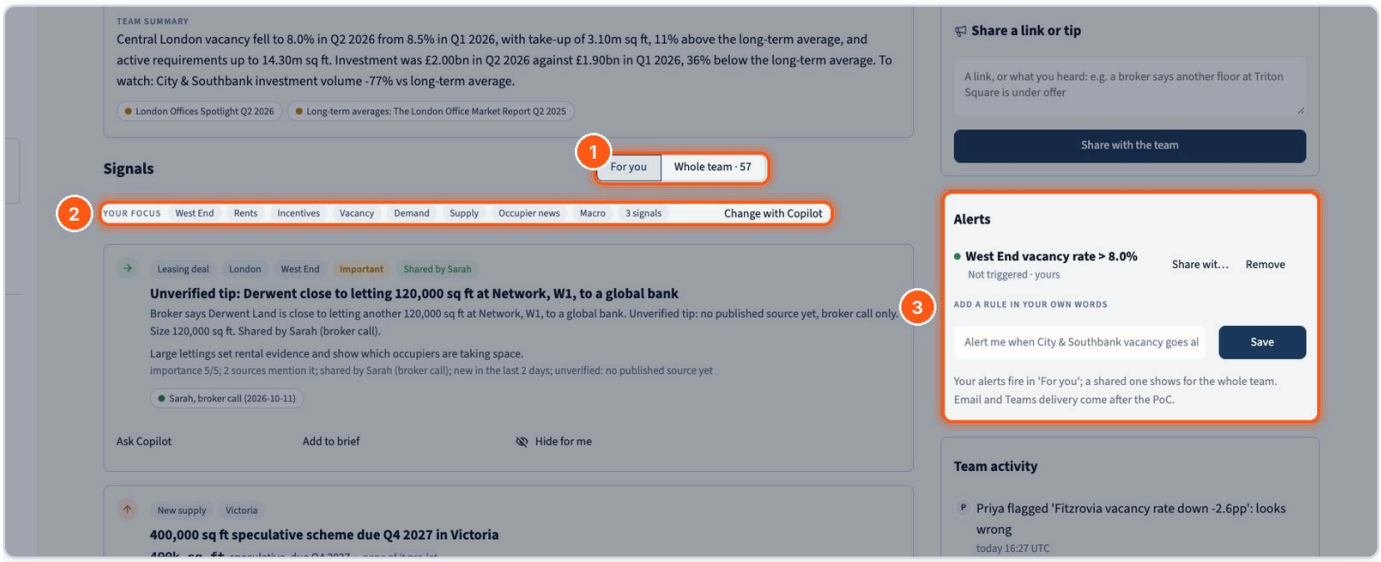

Share a tip, set an alert, see what the team did

1. **Share a link or tip.** The agent checks whether the team already has the story, merges or adds it, credits you and scores how hot it is. A tip with no published source shows as *Unverified tip*.
2. **Alerts.** Write a rule in plain English, such as *Alert me when City Core vacancy goes above 7%*. It is read as you type and tells you whether it would fire today. **Save** keeps it for you; **Share with team** gives it to everyone.
3. **Team activity**: what colleagues added, flagged, uploaded or shared, newest first.

Set up your own view

1. Describe your job in one sentence, e.g. *I manage our West End buildings and report to the board.*
2. The Copilot proposes submarkets, measures, how much to show and alerts just beyond today's values. Nothing is saved yet.
3. **Apply** or **Discard**. **Clear my focus** returns to the team view.

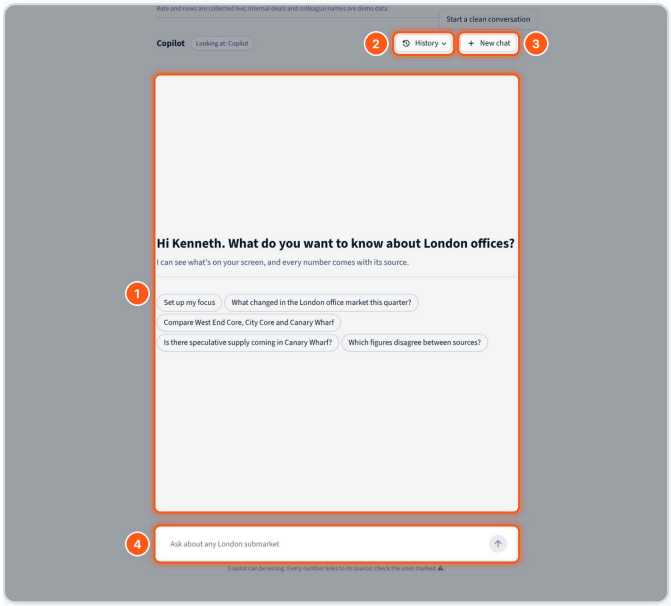

Your view: For you

1. Monitor now opens on **For you**.
2. Your focus. Change it with one line to the Copilot: *more Fitzrovia, less macro.*
3. The alerts set for you. Share one with the team if it is useful to them.

03 · ASK COPILOT

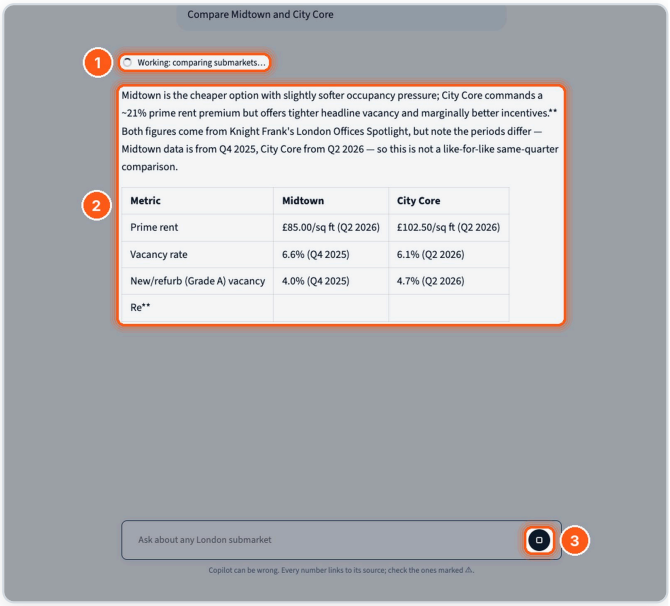

Ask a question, check every number

The Copilot answers from the team's library. Each figure comes from a tool with its source and quarter, and the tools it used are one click away.

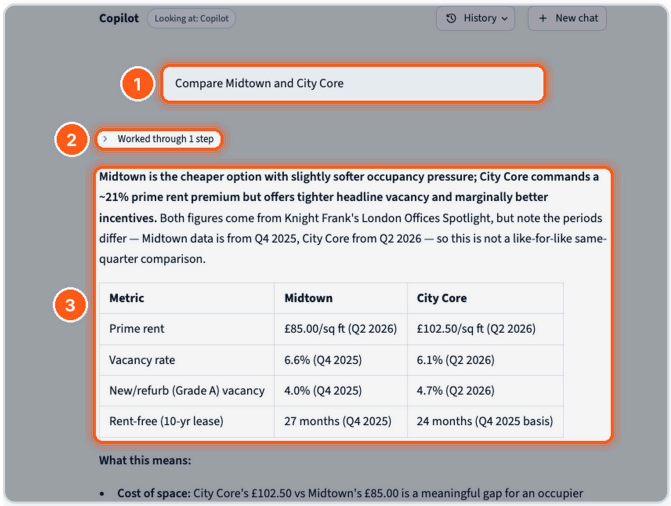

Start a conversation

1. Pick an example question, or **Set up my focus**.
2. **History**: your saved conversations.
3. **New chat** starts a clean one.
4. Type in English or Chinese and press Enter.

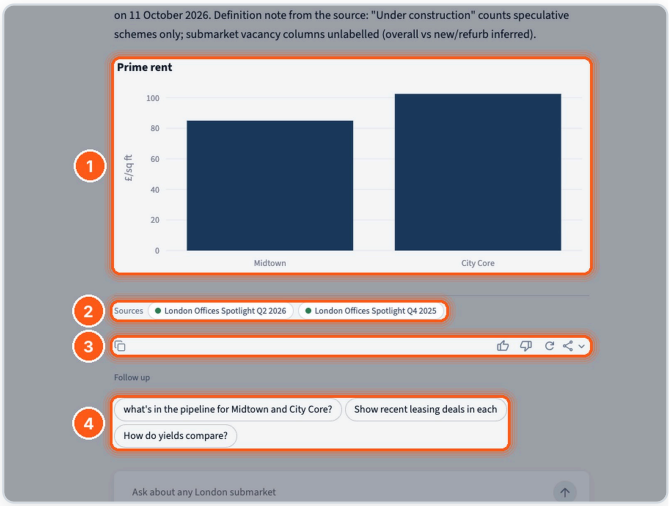

Watch it work

1. The status line names the tool in use.
2. The answer appears as it is written.
3. **Stop** ends the run and keeps what is written.

Read the answer

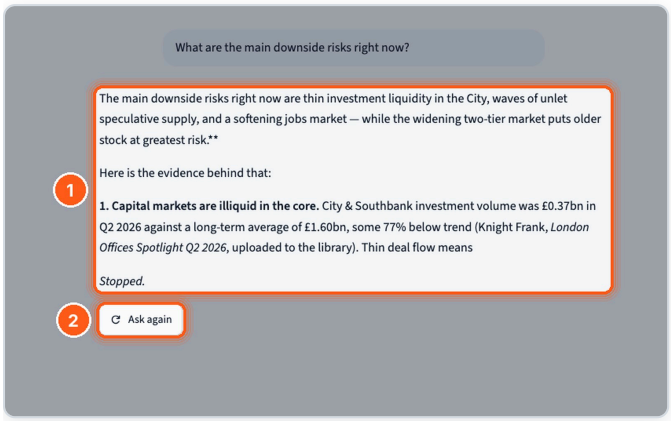

1. Your question.
2. **Worked through N steps**: open it to see the tools used.
3. Each figure is given with its quarter.

Under the answer

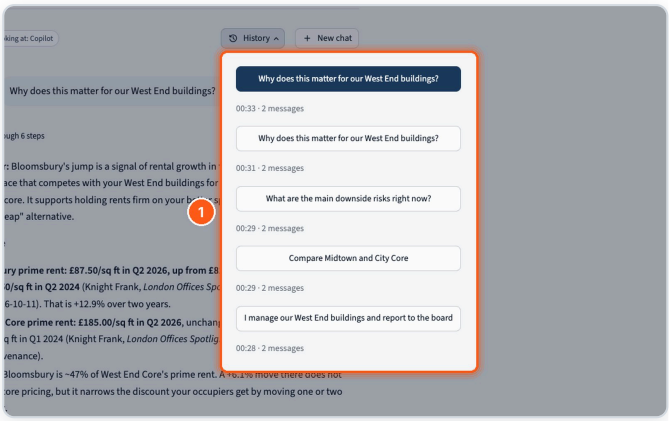

1. Charts from the same data.
2. **Sources**: each chip opens the report.
3. Copy · good / not useful · ask again · share.
4. Suggested follow-ups: click one to ask it.

03 · ASK COPILOT, CONTINUED

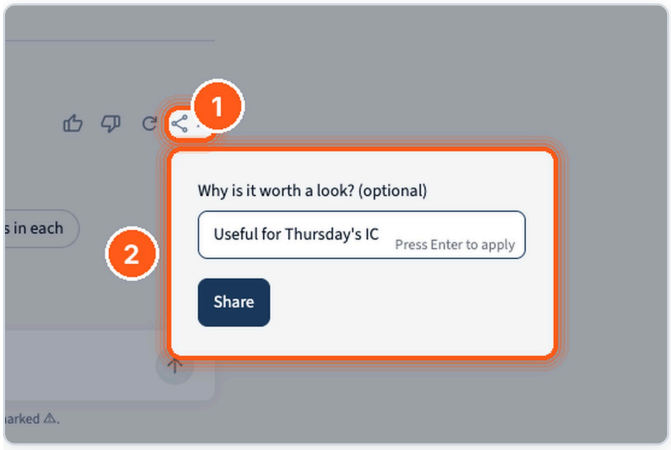

Stop and ask again

1. A stopped answer keeps its text and is marked *Stopped*.
2. **Ask again** runs the same question once more.

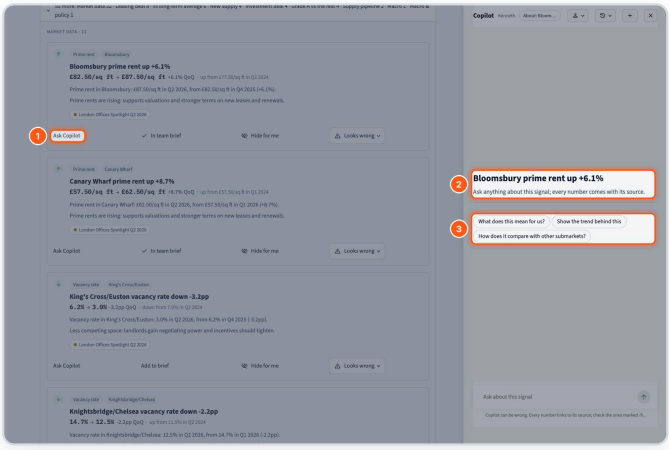

Find an earlier conversation

1. **History** lists your conversations, newest first. They are private to you; click one to carry on.

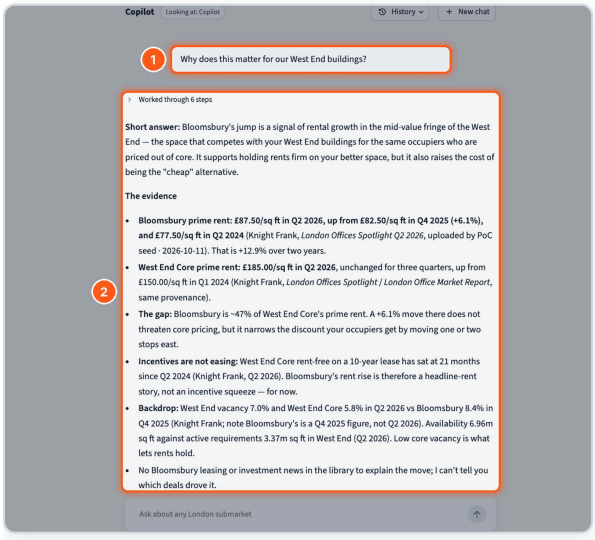

Share an answer with the team

1. Answers are private until you press share.
2. Add a one-line reason and press **Share**. It appears in Team activity with your name; a colleague can **Continue in my Copilot**. **Undo** takes it back.

Ask from any page

1. **Ask Copilot** on a signal card opens a side panel.
2. The panel knows which signal you mean.
3. Ask, or pick a suggestion. The page stays beside it; X closes it.

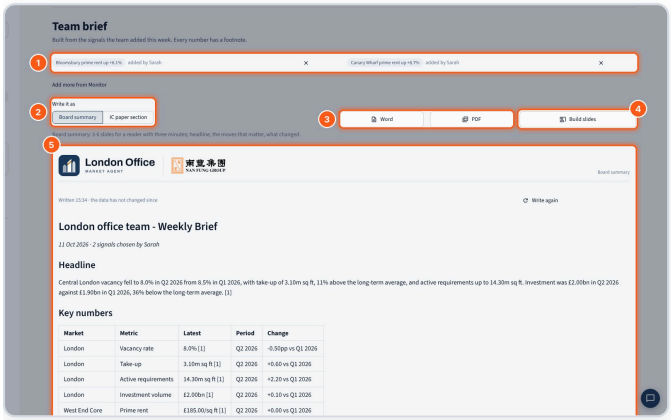

It keeps working when you leave

1. Ask, then close the panel, open another page or reload.
2. The answer keeps being written in the background and is waiting when you come back. If it is still writing, it picks up from the start. Only **Stop** ends a run; the same is true of the brief and slides.

04 · TEAM BRIEF AND SLIDES

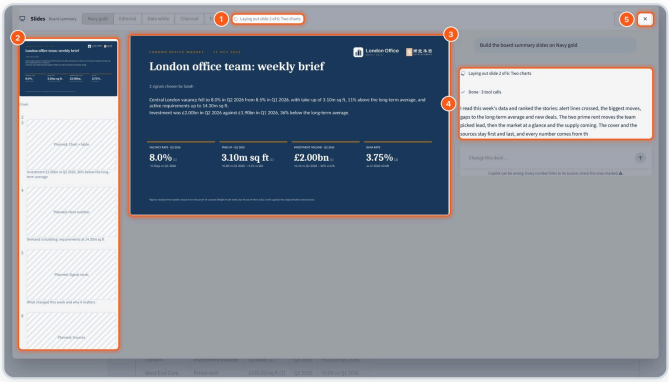

Turn the week into a note and a deck

The brief is written from the signals colleagues added on Monitor, with a footnote on every figure. Download it as a branded research note or build slides from it.

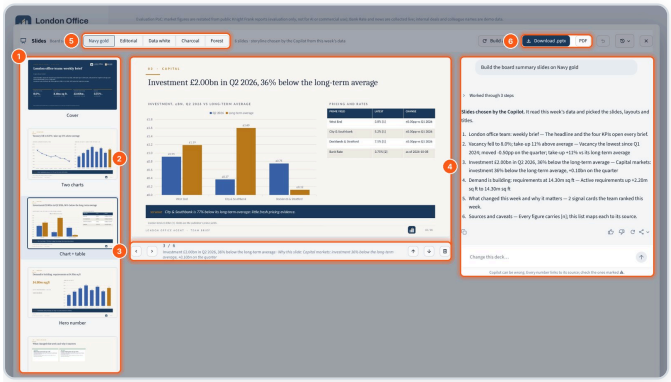

Read and download the brief

1. The signals in the brief and who added them.
2. One brief for the board and the IC.
3. **Word** or **PDF**: a branded research note.
4. **Build slides** opens the slide editor.
5. The brief; each [n] points to its source.

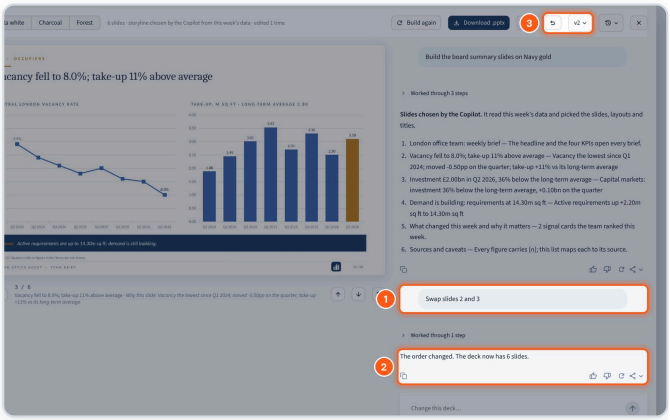

Build the slides

1. What the Copilot is doing now.
2. Planned slides fill in as each is laid out.
3. Each finished slide appears large.
4. The Copilot explains its storyline.
5. Close it any time; the deck keeps building.

Work in the slide editor

1. Thumbnails: click one to open it.
2. The chosen slide, large.
3. Previous, next, move or remove.
4. Change the deck by asking the Copilot.
5. **Theme**: five house themes.
6. **Download .pptx** or **PDF**.

Change the deck by asking

1. Ask for a change, e.g. *Swap slides 2 and 3*.
2. The reply says what actually changed.
3. **Undo**, or pick any earlier version.

THINGS TO ASK THE SLIDE COPILOT

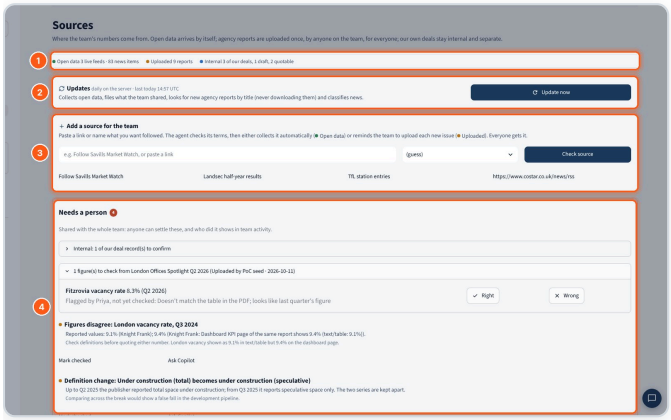

Swap slides 2 and 3 | Remove slide 3 | Add a slide on investment | Shorten to 4 slides | Only show the last four quarters of vacancy | as a line chart | Theme forest | 需要多兩頁 | 刪第3頁，然後換森林主題

"This slide" means the one selected. Only figures in the data are used; anything else is refused with the current value.

05 · SOURCES

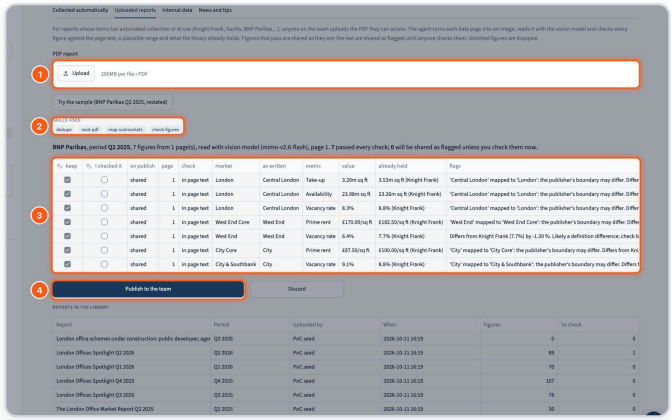

The team's shared library

Three kinds of source, each with a coloured dot: open data collected automatically, reports colleagues upload, and the company's internal data.

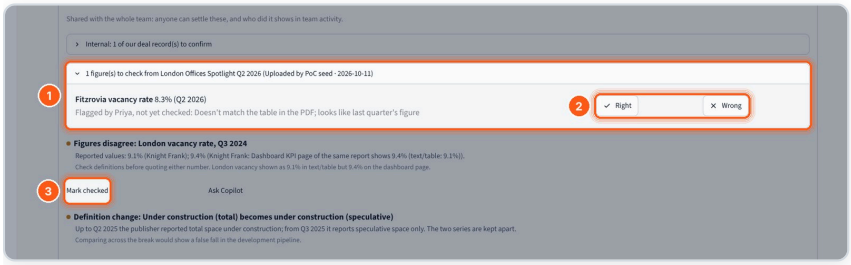

See the library

1. Counts for each kind of source.
2. Daily updates; **Update now** runs one.
3. **Add a source** for the whole team.
4. **Needs a person**: flags and disagreements.

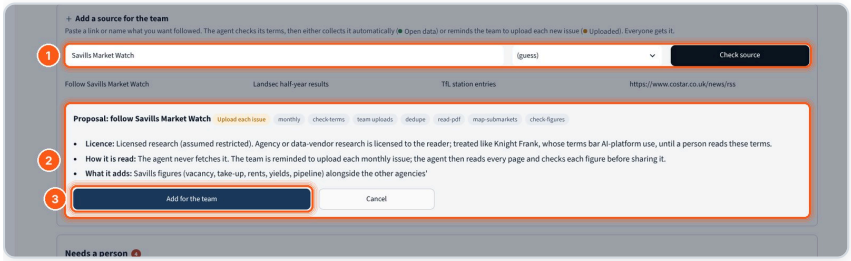

Upload a report

1. Drop a PDF you have access to.
2. The skills the agent used to read it.
3. Each figure with its page and checks; tick **I checked it** or untick **keep**.
4. **Publish to the team**. Duplicates are refused.

Settle a flagged figure

1. The figure, its quarter and why it was flagged.
2. **Right** keeps it; **Wrong** removes it for everyone.
3. Sources disagree: check, then **Mark checked**.

Add a source

1. Paste a link or name a source; **Check source**.
2. It reads robots.txt and the terms, then proposes automatic collection or upload reminders.
3. Nothing is added until **Add for the team**.

PRIVACY

Your conversations, focus and alerts are yours. Only what you share, flag, upload or add to the brief is seen by the team.

WHO DID WHAT

Flags, settled figures, uploads and shared answers all show in Team activity with the colleague's name.

RESTRICTED REPORTS

Reports whose terms bar automated collection or AI use (Knight Frank, Savills, BNP Paribas…) are uploaded by someone with access.
